The AT3816 series is a precision LCR digital bridge, a fully automatic real-time detection micro desktop instrument controlled by a high-performance 32-bit ARM microprocessor. The instrument can choose any testing frequency between **10Hz~ 200kHz**, and can choose a testing signal level between 0.01V and 2.00V in steps of 0.01V. It has built-in -2.5V~+2.5V programmable DC bias, automatic measurement of inductance L, capacitance C, resistance R, complex impedance Z, quality factor Q, loss angle tangent D, phase angle θ (degree), phase angle Θ (radians) and DC Resistance.

The main and auxiliary parameters are all displayed in 6 digits, with two monitoring displays that can simultaneously display Z, D, Q θ R θ d, R, X, G, B, Y, Vac, lac Δ, Δ% A type of. With an accuracy of up to 0.05%, this instrument can meet the requirements of various component manufacturers, schools, research institutes, and metrology and quality inspection departments for precise testing and mass production.
